

**AMENDMENTS TO THE CLAIMS**

1. (Currently amended) A method comprising:

presenting a plurality of windows on an output device, wherein each of the plurality of windows displays a respective application and a respective group identifier that indicates a respective group to which the respective application in the respective window belongs, wherein at least one of the respective group identifiers indicates that the respective window is not to be sent to an auxiliary output device;

selecting a subset of the plurality of windows; and

sending the subset to ~~the auxiliary~~an auxiliary output device, wherein the auxiliary output device is separate from the output device.

2. (Original) The method of claim 1, wherein the auxiliary output device comprises a projector.

3. (Currently amended) The method of claim 1, wherein the selecting further comprises:  
selecting the subset based on the respective group affiliations of the plurality of windows.

4. (Original) The method of claim 1, wherein the selecting further comprises:  
selecting the subset based on a list of allowed applications.

5. (Original) The method of claim 1, wherein the selecting further comprises:  
selecting the subset based on a list of disallowed applications.

6. (Currently amended) The method of claim 1, wherein the selecting further comprises:  
detecting that an application has launched; and  
determining whether the application belongs to a selected group.

ROC920030290US1

7. (Currently amended) The method of claim 1, wherein the selecting further comprises:  
detecting that an application has been brought into focus; and  
determining whether the application belongs to a selected group.

8. (Original) The method of claim 1, further comprising:  
changing the subset that is sent to the auxiliary output device.

9. (Currently amended) An apparatus comprising:  
means for presenting a plurality of windows on an output device, wherein each of the plurality of windows displays a respective application and a respective group identifier that indicates a respective group to which the respective application in the respective window belongs, wherein at least one of the respective group identifiers indicates that the respective window is not to be sent to an auxiliary output device;  
means for selecting a subset of the plurality of windows;  
means for sending the subset to the auxiliary~~an auxiliary~~ output device; and  
means for refraining from sending windows not in the subset to the auxiliary output device, wherein the auxiliary output device is separate from the output device.

10. (Original) The apparatus of claim 9, wherein the auxiliary output device comprises a projector.

11. (Currently amended) The apparatus of claim 9, wherein the means for selecting further comprises:

means for selecting the subset based on the respective group affiliations of the plurality of windows.

12. (Canceled)

13. (Currently amended) The apparatus of claim 9, wherein the means for selecting further comprises:

S/N 10/691,290  
ROC920030290US1

means for detecting that an application has launched; and  
means for determining whether the application belongs to a selected group.

14. (Original) The apparatus of claim 9, wherein the means for selecting further comprises:

means for detecting that an application has been brought into focus; and  
means for determining whether the application belongs to a hidden group.

15. (Withdrawn) A signal-bearing medium encoded with instructions, wherein the instructions when executed comprise:

sending an image to both an output device and an auxiliary output device; and  
changing the image on the output device to a new image while freezing the image on the auxiliary output device.

16. (Withdrawn) The signal-bearing medium of claim 15, wherein the auxiliary output device comprises a projector.

17. (Withdrawn) The signal-bearing medium of claim 15, further comprising:  
unfreezing the image on the auxiliary output device.

18. (Withdrawn) The signal-bearing medium of claim 15, wherein the freezing the image further comprises:

re-transmitting the image to the auxiliary output device.

19. (Withdrawn) The signal-bearing medium of claim 15, wherein the freezing the image further comprises:

transmitting a pre-set image to the auxiliary output device.

20. (Withdrawn) The signal-bearing medium of claim 17, wherein the unfreezing the image further comprises:

S/N 10/691,290  
ROC920030290US1

sending the new image to the auxiliary output device.

21. (Withdrawn) An electronic device comprising:

a processor; and

a storage device encoded with instructions, wherein the instructions when executed on the processor comprise:

displaying a plurality of windows on an output device, wherein at least some of the plurality of windows overlap, and

displaying the plurality of windows on an auxiliary output device in a non-overlapping format.

22. (Withdrawn) The electronic device of claim 21, wherein the windows that overlap include data in a scrollable format and the windows in the non-overlapping format include the data in a non-scrollable format.
